EDUCATION

Universidad Autónoma de Baja California (UABC), FCQI Anticipated graduation: 12/27
B.S. in Software Engineering and Emerging Technologies · GPA 3.61/4.0
Coursework: Human-Computer Interaction, User Interface Design, User Research, Web Development, Emerging Technologies for Software Development, Data Structures, Algorithms, AI, Data Science

SKILLS

Design & UX: Figma, wireframing (low/mid fidelity), user interviews, surveys, think-aloud usability testing, storyboarding, heuristic evaluation, stakeholder mapping, user profiles, benchmarking, Material Design, Apple HIG
Engineering: HTML, CSS, JavaScript, React, Python, Java, C#, C/C++, Dart, SQL, Firebase, Unity, Git/GitHub
Languages: Spanish (native), English (fluent), Chinese (basic)

DESIGN & UX PROJECTS

Catálogo Cimarrón Usability Study & Redesign · *Figma · UABC Library catalog · team of 2* Oct 2025

- Ran a survey and task-based usability tests (think-aloud) on the existing catalog. Findings: 60%+ of respondents rated its visual design unattractive, 53.9% found its search unintuitive and 92.4% said book availability was rarely clear.
- Used storyboards and heuristic evaluation to frame the problems, then co-designed the catalog's redesign in Figma to address them: modernized visuals, simpler filters and clear availability.

AI Marketing Automation App · *Figma, Firebase · deployed* 2026

- Interviewed content managers, benchmarked Ocoya, Predis.ai and Opus Clip, and designed 10 Figma screens: landing page, upload and publish flow, login/registration and confirmation states.
- Ran think-aloud tests with 3 participants and iterated on the feedback, e.g. increased contrast between landing-page sections; then deployed the app on Firebase.

Pet-Sitting Platform · *Requirements elicitation* 2026

- Mapped stakeholders (owners, sitters, admins) and wrote role-specific interview guides, a survey and observation plans focused on trust and safety.

Cognitive Processes & Interface Analysis · *HCI course, team of 4* Aug 2025

- Evaluated TikTok and Discord on perception, memory, attention, reasoning and learning; studied UI components against Material Design and Apple HIG.

ENGINEERING PROJECTS

subri · *React, JavaScript, Tailwind CSS, Firebase* subri.web.app

- Designed and built a web app of creative tools: a pixel-art sprite editor (layers, animation timeline, autosave, real-time collaboration through shareable rooms) and customizable drag-and-drop social profiles.
- Shipped on Firebase Hosting with Google sign-in, Firestore security rules, light/dark themes and privacy/terms pages; used by UABC classmates in a video game development course.

MonitorUABC · *Python, JavaScript, REST, Firebase* github.com/DerazLab/monitoruabc

- Co-built and think-aloud tested a real-time status dashboard for university servers; the JavaScript front end measures live latency with the Fetch API, and server-side caching protects institutional infrastructure from overload.

AI Simulation Engine (MasterDirector) · *C#, Unity, Gemini API*

- Built a real-time engine where Google generative AI drives dialogue and behavior for 4 concurrent agents, feeding character state (hunger, mood) into prompts and parsing structured JSON responses, with A* pathfinding.

JUMeL · *Java, HTML/CSS* github.com/DerazLab/jumel

- Built a pseudocode lexer/parser with scope-aware symbol tables that converts code into Mermaid.js diagrams and HTML reports, making program structure easier to read visually.

EXTRACURRICULAR

NASA International Space Apps Challenge · Team Lead Sep 2026

- Started and led a university team for the global hackathon, designing and building open-source solutions on NASA public datasets.
